

ADAS & collision avoidance

The interior-mount Mobileye® Collision Avoidance System consistently monitors the road ahead of your vehicle, identifies potentially dangerous incidents and helps drivers prevent and mitigate collisions with real-time audio and visual alerts.

Pedestrian and cyclist collision warning –

receive daytime, visual and audio alerts up to two seconds before a collision with a pedestrian or cyclist.

Headway monitoring and warning – receive audio and visual alerts if following a vehicle at an unsafe distance.

- Improve safety habits and driver performance
- Lower costs by reducing collisions, fines and insurance premiums
- Increase fuel savings through safer driving habits
- Create safer environments for your drivers, pedestrians and other motorists
- Integrates with REI surveillance systems

Forward collision warning – receive visual alerts up to 3 seconds before a collision, allowing enough time to react.

Speed limit indicator and traffic sign recognition –

receive visual notifications about speed-limit violations. Detect and read signs declared valid by the Vienna Convention on Road Signs and Signals.

Easy to understand. Easy to install.

Lane departure warning – receive visual and audio warnings when lane deviations occur without proper signaling.
